# Setting up MT4 Client EA

EA capabilities can be improved and enhanced by external servers. External servers can be used for below services.

- automated for signals.
- make sensitive forex news.
- authenticate clients.
- motiterting purposes.
- copy trades.

If you use an external server for your EA, you need to set it up in MT4.

- Go to the below window, Tools->Options->Expert Advisors as below windows.

- Now enable Allow webRequest for listed URL and click add new URL and add server url

Above server url should be configured in your MT4 account. You can do this by referring to the server url section.

Connecting to the bridge

Add your server url (http://ec2-3-13-109-220.us-east-2.compute.amazonaws.com/) in to the MT4 Tools > Options > Expert Advisors > Allow WebRequest for listed URL (Tick the checkbox)
